

Cabinet Liners

Complete flexibility for tray and basket storage.

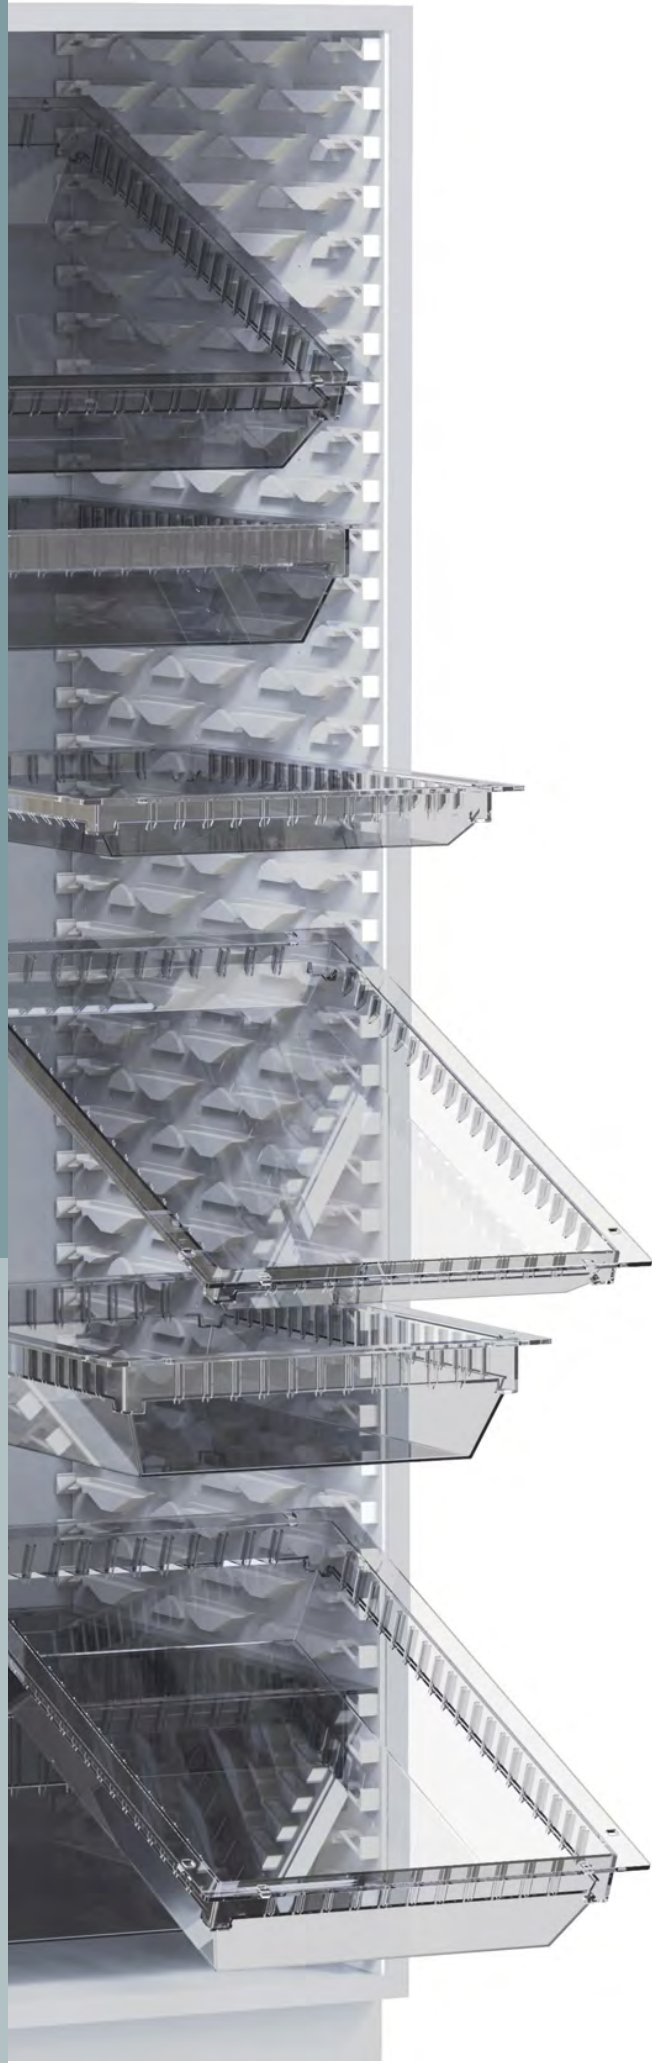

Positioning Options:

- Horizontal
- Slanted
- Tilted

All liners for the Module 60 x 40 system are injection moulded ABS and are extremely rigid and strong. The design of these panels enables trays and baskets to be used horizontally, stored on a slant or pulled out and tilted for ease of access.

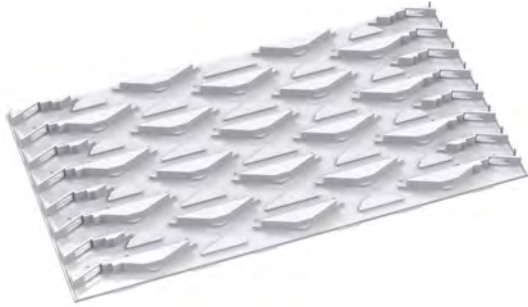

Available Options:

- Safety stop system to prevent trays and baskets coming out entirely.
- Click in wheel system to ensure heavily loaded trays slide easily.

Cabinet Liners

There are different versions of the liner system to accommodate a 40cm or 60cm wide cabinet opening. The liners are modular and easily installed with each panel being 32cm high.

Cabinet Width	Left	Right
40cm	TTT127000-00003	TTT127000-00004
60cm	TTT127000-00001	TTT127000-00002

Wheels

TTT127000-00000

This unique click in wheel system can be attached to any liner panel without requiring any tools. This click in wheel system ensures that trays slide easily even when heavily loaded.

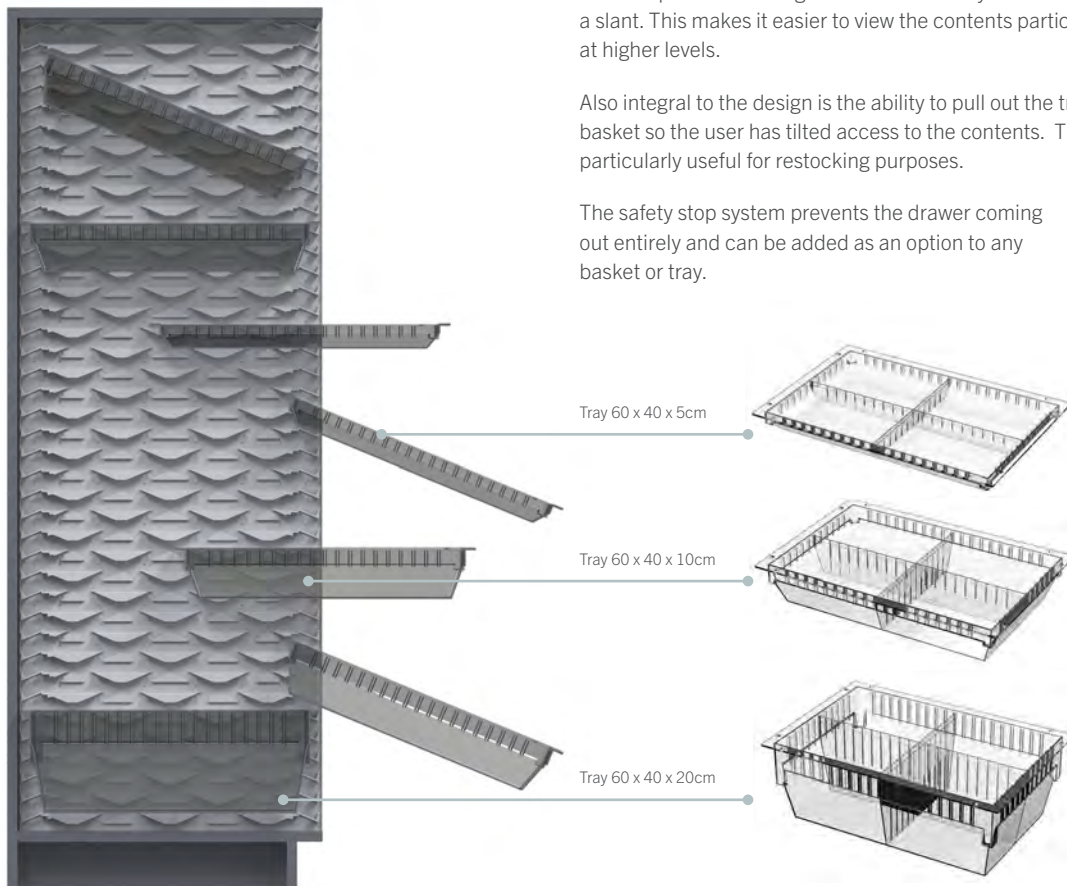

Side View

There are unlimited options for customising the positioning and use of the trays and baskets.

Typically trays and baskets are stored horizontally, however the liner panels are designed to allow the trays to be stored on a slant. This makes it easier to view the contents particularly at higher levels.

Also integral to the design is the ability to pull out the tray or basket so the user has tilted access to the contents. This is particularly useful for restocking purposes.

The safety stop system prevents the drawer coming out entirely and can be added as an option to any basket or tray.

See page 2 for 60 x 40 Trays

Modular Frame Systems

The Module 60 x 40 System can be customised to any room size due to its connecting modular frame system. The Module 60 x 40 frame system allows the trays or baskets to be used for a 40cm or 60cm wide opening. The runner system can also be customised to allow the tray or the basket to slide horizontally or on an angle. This is particularly useful at higher levels to allow better visibility of the stored items.

Cabinet Systems

The Module 60 x 40 cabinet system can be integrated into cabinets of all types, including under bench and full height storage. The cabinet system can be enclosed with sliding or hinged cupboard doors. The Module 60 x 40 cabinet system allows the trays or baskets to be used for 40cm or 60cm wide opening.

Module Liner Systems

All Module liner systems attach easily to the inside of the cabinet and allow the Module 60 x 40 trays and baskets to slide in either horizontally, or on an angle. Module 60 x 40 trays or baskets can also be stored on a slant. This is particularly useful at higher levels as it provides better visibility of the stored items. The addition of the Module Wheels System ensures heavy loaded trays slide easily.
